Final Project Roundtable Presentation

KJ Moses

Color Analysis/Aura Interface

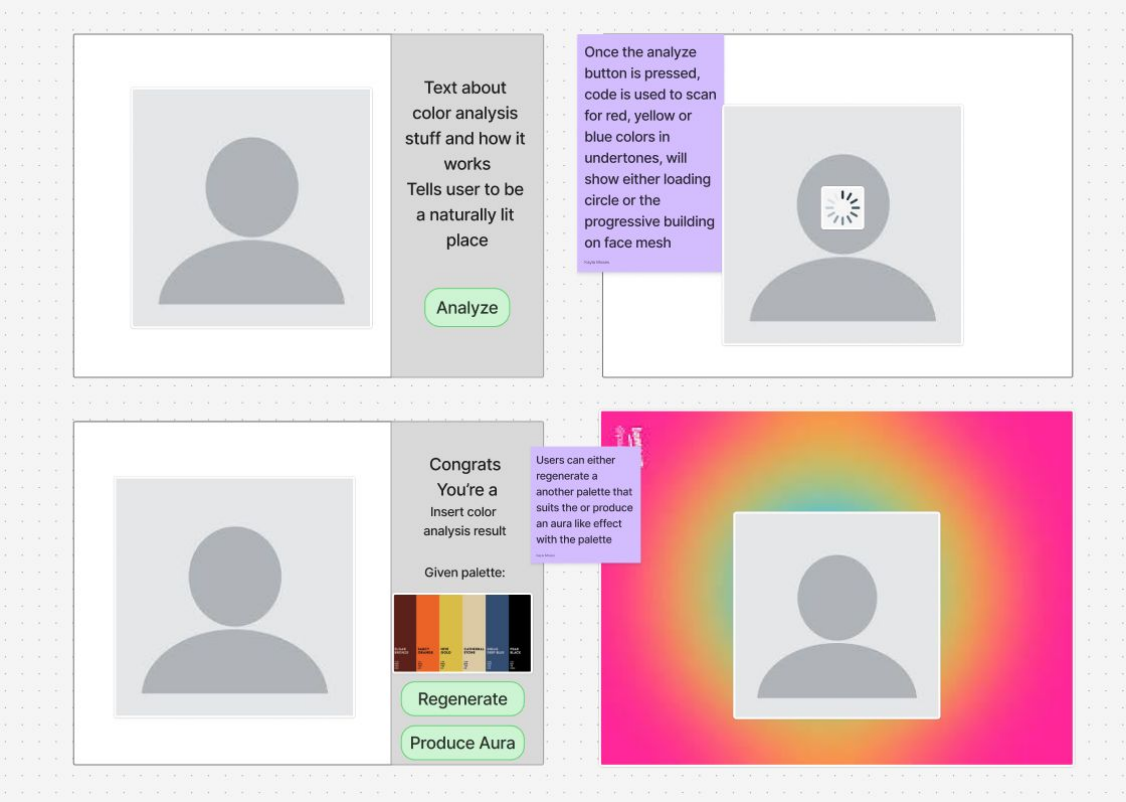
Intro:

Inspired by aura photography and color analysis, this project uses color theory and face detection to analyze a user's personalized color palette through camera input and their undertones. An optional aura can be generated around the face or applied as a full-screen filter to visualize the result.

Libraries/Methods Used:

- P5.palette or import CSV of colors
- ml5.js
- p5.touchgui/canvasGUI

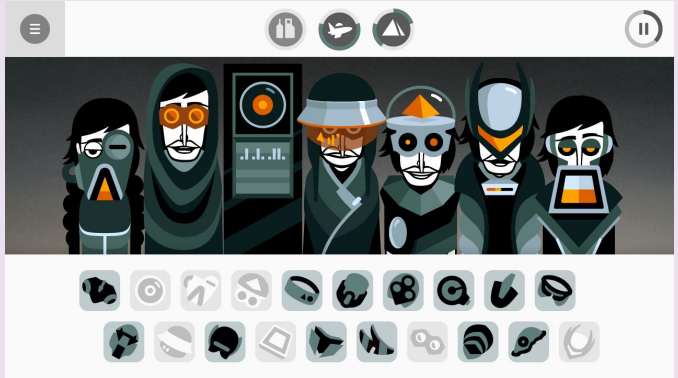
Color Analysis/Aura Interface



Beat Making/Music Game

Intro:

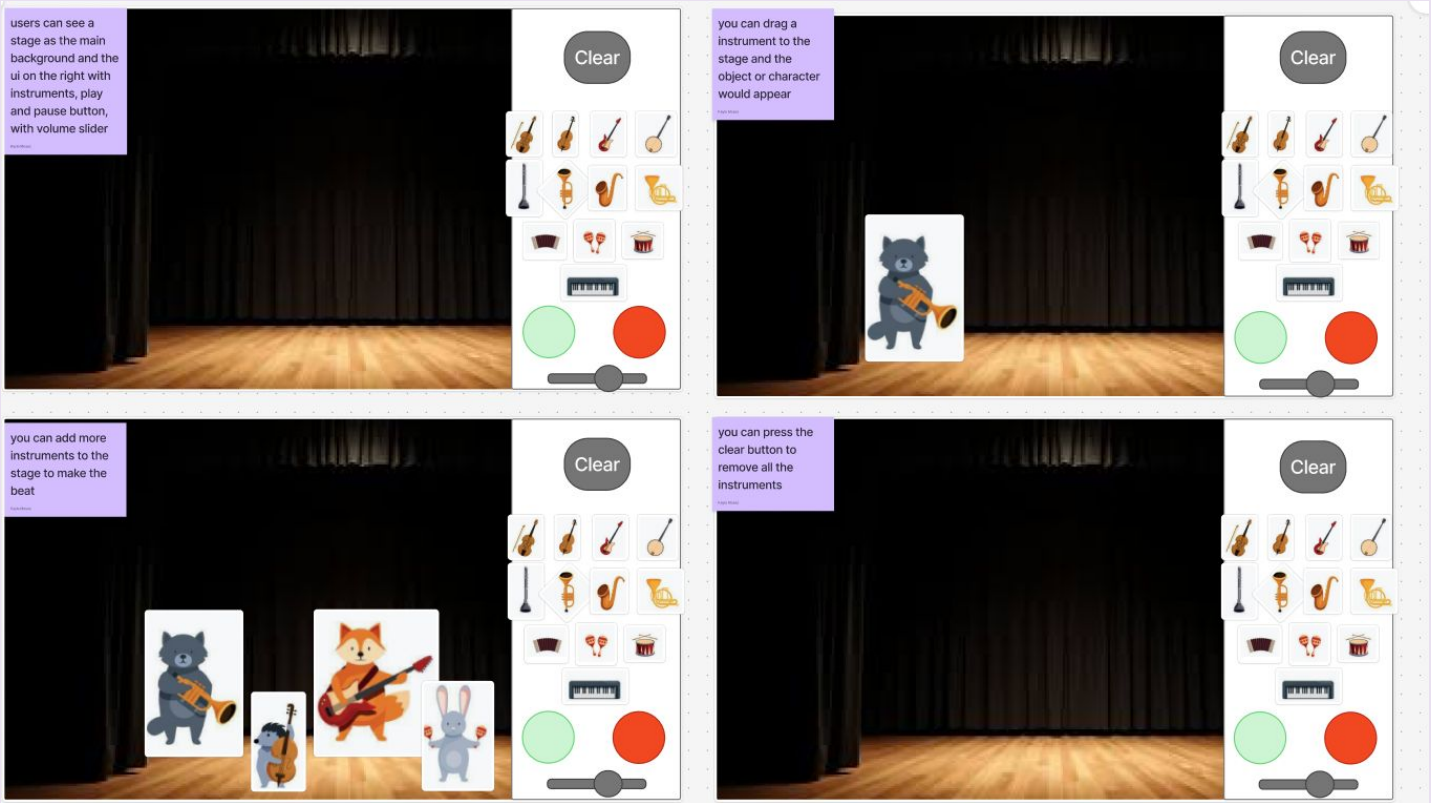
Based on games like ***Incredibox*** and ***My Singing Monsters***, this project explores a game-like interface where animated objects produce corresponding sounds. As more objects are added, the sounds layer together to form a looping musical composition..



Libraries/Methods Used:

- p5.sound
- p5.touchgui/canvasGUI

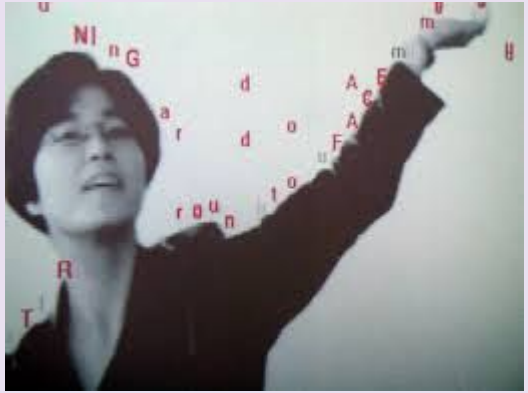
Beat Making/Music Game



Poem/Short Story Visualizer

Intro:

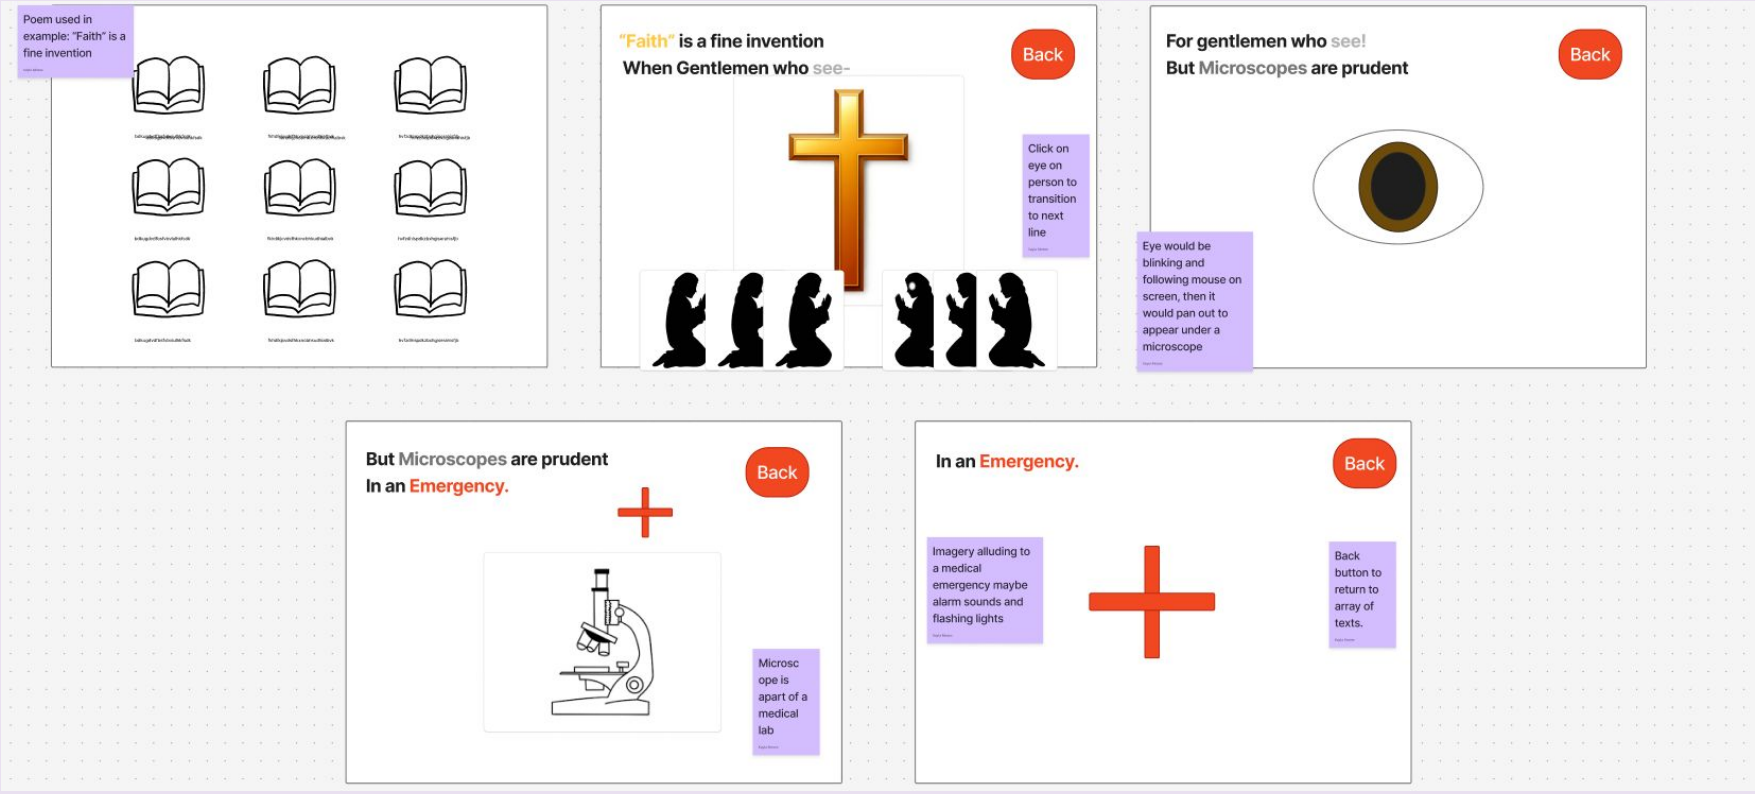
Based on text rain and visual poetry, this project creates an interactive library of poems or short stories that users can engage with directly. Highlighted words or objects can be clicked to trigger visual changes, allowing the background and scenes to evolve as the user helps guide the progression of the narrative. Audio narration may also be included.



Libraries/Methods Used:

- p5.sound
- p5.RiTa
- BMWalker.js?

Poem/Short Story Visualizer



THANK YOU!
